
trouble with the mac module

Scritto da wilkes704 - 10/02/2009 22:19

I cannot get the icons to display. I just get a text version of the menu. Is there any code that needs to go into the template?

I have the menu set in a module position with links defined, the images are defined for the links as well.

Also the links are not styled like the css from the menu, they are styled like my template if that helps any.
